

Welcome to the user manual for QM HIRE,
a university teaching assistant recruitment
platform designed and developed by
Group105 as part of our Software
Engineering project.

QM HIRE User Manual

Group105 Software Engineering Project

Preface

Welcome to the user manual for QM HIRE, a university teaching assistant recruitment platform designed and developed by Group105 as part of our Software Engineering project.

QM HIRE was created to support the full recruitment workflow for teaching assistant positions, including vacancy browsing, application tracking, resume management, communication, and administrative workload monitoring. The platform is designed for three main user roles: Teaching Assistants (TA), Module Organisers (MO), and Administrators, each with a tailored interface and role-specific functions.

This manual provides a guided overview of the main pages and features of the system. It is intended to help users quickly understand how to navigate the platform and perform common tasks efficiently.

We would also like to express our sincere appreciation to every member of Group105 for their effort, collaboration, and dedication throughout the design, development, integration, and refinement of this project. Every contribution played an important role in shaping the final system.

1. Landing Page and Login Interface

1.1 Homepage

The homepage presents the overall identity of QM HIRE and introduces the recruitment system in a structured and visually engaging way. It is divided into multiple sections that guide users through the platform's main message, benefits, timeline, and entry actions.

Users can scroll through the homepage to explore the recruitment journey. The section indicators in the top-right corner help users understand which stage they are currently viewing. The final section provides a clear action path, including the option to log in to the portal and reach support if needed.

This page is especially useful for first-time users, as it provides context before they enter the system itself.

1.2 Login Interface

The login page is the main authentication entry for registered users. It provides a clean and simple form where users can enter their university email address and password to access the portal.

The page includes the following key functions:

- Email input field for entering the registered university email address
- Password input field for secure account access
- Forgot Password link for users who need to reset their password
- Sign In button to enter the system
- Create an Account link for new users who do not yet have an account

The design of the login interface follows the same visual style as the rest of the system, ensuring consistency and ease of use. The layout is intentionally minimal so that users can focus on the login process without distraction.

After successful login, users are redirected to a role-specific dashboard based on their account type. For example, Teaching Assistants, Module Organisers, and Administrators each see a different portal interface tailored to their responsibilities.

If incorrect credentials are entered, the system provides clear feedback so that users can correct the issue and try again.

The screenshot shows a web browser window titled "Login - QM HIRE" with the URL "localhost:8080/ta105/login". The login form is centered and contains the following elements:

- 1 Logo / System Name:** A dark blue square icon with a white shopping bag, followed by the text "QM HIRE".
- 2 Page Title:** The text "Welcome back" in bold, followed by "Sign in to access your TA portal".
- 3 Email Address:** A label "UNIVERSITY EMAIL" above a text input field containing "student@university.edu".
- 4 Password:** A label "PASSWORD" above a password input field with masked characters "*****".
- 5 Forgot Password:** A blue link labeled "Forgot?" next to the password field.
- 6 Sign In Button:** A dark blue button with the text "SIGN IN →".
- 7 Create an Account:** A link labeled "Create an account" below the sign in button, preceded by the text "Don't have an account?".

Annotations 1 through 7 are shown in yellow boxes with red lines pointing to the corresponding elements in the form.

2. TA User Guide

2.1 TA Dashboard

The TA dashboard serves as the main overview page after login. It gives users a quick summary of their activity and current progress in the system.

The dashboard also provides shortcut buttons such as Manage Resumes and Browse Vacancies, allowing users to move quickly to the most frequently used parts of the system. In addition, the page includes sections such as Recent Activities, Action Required, and Upcoming Deadlines, helping users stay informed about recent submissions, profile readiness, and next steps.

A Profile Strength panel is also displayed to indicate how complete and ready the user's profile is. This gives TAs a clear sense of whether they are prepared to apply for vacancies efficiently.

Overall, the dashboard acts as a central control panel for TA users, providing both a summary of current progress and quick access to important actions.

2.2 Applications

The Applications page allows TAs to track all submitted applications in one place. This page is designed to help users monitor where they have applied, which resume was used, and what the latest decision status is.

The page also includes a search bar and filtering tools so that users can quickly locate specific applications. Status labels such as Submitted, Pending, Rejected, or other review-related updates allow users to understand their application progress at a glance.

Depending on the state of the application, the actions area may allow the user to:

- view the related vacancy,
- view feedback,
- withdraw an application,
- or access AI-assisted writing features if enabled.

This page is important because it provides transparency throughout the application process and helps users keep track of multiple submissions at the same time.

2.3 Resumes

The Resumes page is where TAs manage the resume documents used for applications. It supports both resume organisation and resume improvement.

On this page, users can:

- upload a new resume,
- view an existing resume,
- edit resume details,

- duplicate a resume,
- delete a resume,
- assign labels or tags,
- manage extracted skills.

Each resume card presents useful information such as the resume title, academic area, GPA, related skill tags, file name, availability information, and last updated time. This makes it easier for users to maintain different versions of their resume for different applications.

The page also includes an AI Resume Review area, where supported files can be uploaded for analysis and improvement suggestions. In addition, a Resume Tips for TAs section provides practical advice on how to strengthen resume quality, such as highlighting teaching experience, relevant coursework, and measurable achievements.

This page plays a key role in helping users prepare stronger applications and maintain their application materials effectively.

2.4 Vacancies

The Vacancies page allows TAs to browse all available teaching assistant positions published on the platform. It is one of the most important pages for student users, as it is the main entry point for discovering opportunities.

2.5 Messages

The Messages page supports communication between users and the system or organisers. It provides a structured messaging environment where TAs can read updates and send replies when needed.

3. Module Organiser (MO) User Guide

3.1 MO Dashboard

The MO dashboard provides a quick overview of recruitment activity. It highlights key data such as:

- posted vacancies,
- received applications,
- pending review items.

It also includes shortcut buttons such as Manage Vacancies and Review Applications, allowing organisers to move directly to important tasks. Recent activities and action-required panels help MOs monitor their workflow efficiently.

3.2 Application Review

The application review function allows MOs to check incoming applications for their vacancies. Organisers can view applicant details, associated resumes, and current application status.

This part of the system supports decision-making by making it easier for organisers to compare applications and track recruitment progress in one place.

4. Administrator User Guide

The Administrator interface supports system-wide monitoring and platform management. It is designed for users responsible for overseeing accounts, workload distribution, shared skills, and system audit records.

4.1 Workloads

The Workloads page allows administrators to monitor TA workload distribution. It displays summary statistics such as:

- total accepted TAs,
- total weekly hours,
- total estimated income,
- number of overloaded TAs.

It also includes a detailed workload table showing accepted vacancies, weekly hours, workload totals, estimated income, and status labels such as Normal or Overloaded. This helps administrators identify imbalance and make better assignment decisions.

4.2 User Management

The Users page allows administrators to manage platform accounts. Admins can create new TA, MO, or Admin accounts and maintain existing user records.

This page supports role-based account administration and helps ensure that the platform remains organised and accessible to all user groups.

4.3 Skill Management

The Skills page maintains the shared skill catalogue used across the platform. Administrators can create, edit, and manage skill entries that may be linked to resumes or vacancy requirements.

This helps standardise the way teaching and technical skills are recorded in the system.

4.4 Audit Logs

The Audit Logs page records important system actions. It allows administrators to review changes made by different users, filtered by operator, action, entity, or date.

This feature improves transparency and provides traceability for important system events.
